Re: Picillo Site

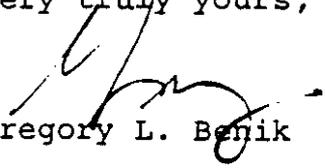

Dear Joel:

As you know, the Rhode Island Department of Environmental Management and the generator group, with the knowledge of EPA, recently took surface, groundwater and sediment samples at the Picillo site. A number of the samples were analyzed for the Appendix VIII chemicals.

The generator group technical committee has been active in evaluating available studies and data to determine to what extent, if any, this site presents a risk to the environment. The test results from this most recent round of sampling would, obviously, be of great assistance in continuing that exercise. Therefore, on behalf of the generator group, I request that EPA and Rhode Island Department of Environmental Management release to Dick Hendey of Olin Corporation all sampling results generated from the most recent sampling. We would, of course, be willing to provide EPA and RIDEM the results from the split samples taken by the generator group.

If you have any questions or comments regarding this, do not hesitate to contact me.

Very truly yours,

  
Gregory L. Benik
